IDI 61-99 - General Services Administration Suggestion No. CO-650

The technique of preparing colored slides from black and white art work is not new since lantern slides (3 1/4" x 4 1/4") have been prepared in this manner for many years. However, application of color to 35 mm negatives under magnification, as proposed, has merit as an adaptation of an old technique to new material.

There are other methods and techniques available for preparing colored slides which are more adaptable to our work than the one proposed, therefore, no tangible benefits are apparent through the adoption of this suggestion.
